

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-15 (Canceled).

Claim 16 (Currently Amended): The scalp massaging kit according to Claim [[15]] 23, wherein the cationic polymer comprises at least one compound selected from the group consisting of cationic cellulose, a homopolymer of a diallyl quaternary ammonium salt, a diallyl quaternary ammonium salt/acrylamide copolymer, a quaternized polyvinylpyrrolidone derivative, cationic hydrogel, and a cationic group-containing copolymer obtained by radical polymerization of a monomer mixture including a cationic group-containing vinyl monomer, a hydrophilic nonionic group-containing vinyl monomer, and a cross-linking vinyl monomer having a plurality of vinyl groups per molecule.

Claim 17 (Currently Amended): The scalp massaging kit according to Claim [[15]] 23, wherein the nonionic surface active agent comprises at least one compound selected from the group consisting of polyoxyethylene alkyl ethers, polyoxyethylene hydrogenated castor oil, polyoxyethylene sorbitan fatty acid esters, higher fatty acid (C₁₀-C₂₄) glycerol esters, alkylamine oxides, and alkyl saccharides.

Claim 18 (Currently Amended): The scalp massaging kit according to Claim [[15]] 23, wherein the alcohol comprises at least one alcohol selected from the group consisting of ethanol, propylene glycol, butylene glycol, polyethylene glycol, glycerol, and sorbitol.

Claim 19 (Currently Amended): The scalp massaging kit according to Claim [[15]] 23, wherein the plurality of projections each have a round tip portion having a curvature

radius between 0.5 mm to 4 mm, a base portion having a diameter between 5 mm and 10 mm, and a height between 8 mm and 12 mm.

Claim 20 (Currently Amended): The scalp massaging kit according to Claim [[15]] 23, wherein the plurality of projections has a density between 0.5 and 2.0 projections per cm² on the flat side surface.

Claims 21 and 22 (Canceled).

Claim 23 (New): A scalp massaging kit, comprising:

a detergent containing 0.1 to 10 parts by weight of a cationic polymer, 1.0 to 50 parts by weight of a nonionic surface active agent, 1.0 to 50 parts by weight of an alcohol, and water in an amount making 100 parts by weight; and

a detergent container having a body and a cover, the body being configured to contain the detergent therein and having an opening for the detergent in an upper portion thereof and an inner cover removably covering the opening, the cover being detachably attached to the upper portion of the body over the opening, and having a flat side surface extending away from the body and a plurality of projections on the flat side surface, the plurality of projections being positioned to facilitate massaging of a scalp,

wherein the plurality of projections gradually decrease height toward a center portion of the flat side surface covered with the plurality of projections such that apices of the plurality of projections form an imaginary concave plane, and the imaginary concave plane has edge portion which gradually decrease height toward midpoints of the edge portions,

the plurality of projections each are conical and have a round tip portion having a curvature radius between 0.5 mm to 4 mm, a base portion having a diameter between 5 mm and 10 mm, and a height between 8 mm and 12 mm.
